PROFESSIONAL PROFILE

Full Stack Developer with over 5 years of experience building management systems, administrative platforms, and real-time applications for public institutions and labor unions. Specialized in frontend development with React, TypeScript, Next.js, and Astro, with a focus on accessible, maintainable, high-performance interfaces. Solid backend experience with Laravel, Node.js, and REST APIs, along with integration of payment gateways, document generation, SSO authentication, and operational process automation.

Used to owning projects end to end: from business requirements to production, including data modeling, architecture design, integration of external services (payments, PDF generation, authentication), and continuous deployment. Comfortable working in agile environments and with non-technical stakeholders.

PROFESSIONAL EXPERIENCE

Frontend Developer *February 2023 – Present*

Municipalidad de Catamarca Capital *Catamarca, Argentina*

- Built a fine-payment system (juzgado-pagos) with React, Vite, and Tailwind, integrating MercadoPago QR payments and automatic PDF receipt generation with Gotenberg, digitizing a process that was previously handled in person.
- Developed an administrative dashboard in Next.js 15 with Tailwind v4, shadcn/ui, and Recharts, including a site-wide dark mode built with a custom ThemeProvider and SSO authentication via Keycloak.
- Built the Municipal Digital Newspaper Archive (React, TypeScript, Vite, Directus CMS, and the Koha library API): a PDF viewer with page-flip animation, a paginated digital catalog, and publication detail pages with direct URL-based data fetching.
- Designed and maintained public-facing lookup applications for the local traffic court (infractor search by CUIT, online submission of appeals), fixing UX bugs in login forms and conditional routing.
- Implemented CI/CD pipelines with GitHub Actions, reducing production errors and improving deployment times by more than 80%.
- Automated repetitive administrative processes with UiPath and integrated automated testing with Jest, improving software stability.
- Cut delivery times by 50% compared to the previous development workflow, through component reuse and a standardized project architecture.

FEATURED FREELANCE PROJECTS

Full Stack Developer (Freelance) *June 2025 – July 2025*

Sindicato Unido de Trabajadores y Empleados de PAMI (SUTEPA) *Buenos Aires, Argentina*

- Built a real-time voting system with React, Laravel, and WebSockets for union elections, ensuring high availability and instant result updates.
- Designed real-time voter turnout dashboards with geographic segmentation.
- Optimized architecture and data flows, improving operational efficiency by 60%, and implemented automated CI/CD that cut deployment time by 40%.

Full Stack Developer (Freelance) *February 2024 – July 2024*

Sindicato Unido de Trabajadores y Empleados de PAMI (SUTEPA) *Buenos Aires, Argentina*

- Modernized the union's academic management system, replacing manual Excel-based processes with a web platform built in Laravel and React.
- Fully migrated authentication and layout state management from React Redux to TanStack Query, simplifying the architecture and reducing data-sync bugs.

— Implemented CI/CD with GitHub Actions and deployment to production servers; optimized queries and components, cutting delivery times by 40%.

Full Stack Developer (Freelance) *September 2024 – October 2024*
Escuela para Adultos EDJA N.º 4 *Catamarca, Argentina*

— Modernized the teacher and student management system with Laravel and React, replacing inefficient Excel-based spreadsheets.
— Implemented CI/CD pipelines with GitHub Actions, ensuring smooth and reliable deployments on Hostinger servers.
— Optimized components and database queries, cutting project delivery times by 40%.

PERSONAL PROJECTS

— Personal portfolio (Astro): bilingual Spanish/English site using Astro's native static routing, a central translation dictionary, and locale-specific data folders.
— Personal finance dashboard (Astro, JavaScript, Chart.js): projection, account, and expense tracking with localStorage persistence, in progressive migration to Tailwind.
— Manga Collection Tracker (React, TypeScript, Vite, Supabase): personal catalog with automatic changelog generation that compares catalog versions and detects additions and removals.

EDUCATION

Diploma in Full Stack Web Programming *February 2022 – February 2023*
Universidad Tecnológica Nacional *Buenos Aires, Argentina*

— Solid programming fundamentals; frontend development with React and backend development with Node.js and Express.

Cybersecurity *June 2025 – July 2025*
Coderhouse *Buenos Aires, Argentina*

— Basic security audits and use of tools such as OWASP ZAP.

JavaScript *January 2022 – March 2022*
Coderhouse *Buenos Aires, Argentina*

— Application interactivity with ES6+, DOM manipulation, and REST API consumption.

Web Development *November 2021 – January 2022*
Coderhouse *Buenos Aires, Argentina*

— Responsive website built with HTML5, CSS3, and Bootstrap.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, Astro, Svelte, Angular, Tailwind CSS, HTML5, CSS3

Backend: Laravel, Node.js, Nest.js, Express, REST APIs, WebSockets, Supabase

DevOps & Tools: Git, GitHub Actions, CI/CD, Docker, Jest, UiPath, Netlify

Professional Skills: Teamwork, problem-solving, communication, critical thinking

Languages: Spanish (native) · English (advanced, C1)
